

AI Business Process Opportunity Assessment Engine

PROJECT MAP & MASTER FLOW — v1.0

1. The project in one picture

BUSINESS PROCESS DOCUMENT SOP / Process description / Workflow documentation	PROCESS UNDERSTANDING Parse → extract activities → actors → systems → inputs/outputs	HUMAN VALIDATION User reviews and corrects extracted process	AI OPPORTUNITY ENGINE Suitability gates → scoring → AI capability matching	DECISION SUPPORT Automate / Augment / Investigate / Do Not Recommend	ADOPTION PLAN Evidence → future workflow → roadmap → report
---	---	--	--	---	---

Core principle: the system recommends where AI may fit; it does not deploy AI into the enterprise.

2. System hierarchy

Conflict rule: If a lower-level document or new request conflicts with the Master Bible, stop, flag the conflict, discuss it, and update the Master Bible before implementation.

3. End-to-end technical flow

1. Upload process document	2. Extract text and structure	3. LLM extracts structured process	4. Store evidence snippets	5. Human reviews/corrects	6. Characterise each activity	7. Apply technical-fit / value / risk gates
8. Score and prioritise	9. Match AI capability	10. Choose AI role	11. Explain recommendation	12. Generate future workflow	13. Generate adoption roadmap	14. Export report

LLM role: understand and structure language, extract evidence, assist with ambiguous interpretation. Decision-engine role: apply explicit research methodology and make the constrained recommendation.

4. Decision logic

GATE 1 Is there a suitable AI capability? NO → Investigate / Do not recommend	GATE 2 Is there sufficient business value? LOW → Prioritise conventional improvement	GATE 3 Is risk acceptable for the desired autonomy? HIGH → Human-led / Augment
PRIORITISE Value • feasibility • data readiness • complexity	MATCH CAPABILITY Extraction • prediction • classification • generation • detection • decision support	ASSIGN AI ROLE Automate • Augment • Investigate Further • Do Not Recommend

Evidence chain

Original document	Extracted evidence	Process activity	Criteria assessment	Gate / score	AI capability	Recommendation
-------------------	--------------------	------------------	---------------------	--------------	---------------	----------------

5. Product screens

Screen	Purpose
1. Project Home	Create assessment • upload document • process metadata
2. Extraction Review	Detected steps • actors • systems • evidence • edit/confirm
3. AI Opportunity Map	All activities • recommendation • priority • risk • AI capability
4. Opportunity Detail	Evidence • criteria • reasoning • human role • prerequisites
5. Future-State Workflow	Current process vs proposed process • AI intervention points
6. Adoption Roadmap	Pilot • data • integration • testing • governance • rollout
7. Executive Report	Summary • top opportunities • risks • next steps • evidence appendix

6. Research & evaluation flow

LITERATURE AI adoption • BPM • prioritisation • human-AI collaboration • responsible AI	METHODOLOGY Criteria • gates • scoring • AI role assignment	SYSTEM Working engine + UI	EVALUATION Process extraction • real-world cases • human evaluation • LLM baseline	FINDINGS Accuracy • alignment • usefulness • errors • limitations	RESEARCH CONTRIBUTION Operationalising explainable process-level AI opportunity assessment
--	---	-------------------------------	---	---	--

7. Development sequence

PHASE 1 Backend foundation Schemas + sample + decision engine + tests	PHASE 2 Document ingestion PDF/text extraction	PHASE 3 LLM extraction Structured process + evidence	PHASE 4 Human validation Review/edit process	PHASE 5 Integration Extraction → decision engine	PHASE 6–8 Reports + UI + evaluation
--	---	--	---	--	--

8. Role boundary: where this product sits

BUSINESS / PROCESS OWNER Provides current-state process documentation and business context	AI OPPORTUNITY ASSESSMENT ENGINE Identifies where AI could fit, why, at what autonomy level, and what adoption would require	SOLUTION ARCHITECT Designs the target technical architecture and integration approach	FDE / IMPLEMENTATION TEAM Integrates, customises, builds, tests and deploys in the customer's actual environment	PRODUCTION Monitored AI-enabled business process
--	--	---	--	--

This project owns the middle box. It is intentionally upstream of enterprise implementation.
